

Introduction to Artificial Intelligence

Artificial Intelligence (AI) is a branch of computer science that focuses on building systems capable of performing tasks that normally require human intelligence. These tasks include learning, reasoning, problem-solving, language understanding, and decision-making. Machine Learning is a subset of AI where models learn patterns from data. Deep Learning is a subset of Machine Learning that uses neural networks with multiple layers. Retrieval-Augmented Generation (RAG) combines information retrieval with large language models to generate accurate and context-aware answers from documents.
